

AWS DevOps Engineer Intern Assignment (1 Day)

Objective

Deploy a simple website on an AWS EC2 instance and document the process.

Task 1: Create an AWS EC2 Instance (20 Marks)

Launch an Ubuntu EC2 instance, create a Security Group, allow ports 22 and 80, and connect using SSH.

Deliverables: EC2 Public IP, EC2 Dashboard screenshot, SSH login screenshot.

Task 2: Linux Basics (20 Marks)

Update packages, install Nginx, check Nginx status, restart Nginx, check disk usage, memory usage, and running processes.

Deliverables: Screenshots showing Nginx installed, running, and website accessible.

Task 3: Host a Simple Website (20 Marks)

Create a basic HTML page containing your Name, College, Branch, Email, and Current Date. Replace the default Nginx page with it.

Deliverables: Website accessible via EC2 Public IP and browser screenshot.

Task 4: Git & GitHub (20 Marks)

Create a GitHub repository and upload the HTML file and README.md. Include EC2 setup steps, Nginx installation, and commands used.

Deliverables: GitHub repository link.

Task 5: Documentation (20 Marks)

Prepare a PDF with AWS services used, Linux commands, problems faced, learnings, and total time taken.

Bonus (+10 Marks)

Complete any ONE: Attach an Elastic IP, create another Security Group, install Docker and run hello-world, or create a shell script to restart Nginx.

Evaluation

AWS EC2 Setup:20, Linux Basics:20, Website Deployment:20, Git & GitHub:20, Documentation:20, Bonus:+10. Total:100 (+10 Bonus).

Submission

Submit GitHub repository link, PDF report, EC2 Public IP (if running), and screenshots in a ZIP file.
